Book More Jobs

Missed calls become missed jobs.

\$297,675

Cut Your No-Shows

Empty appointments burn capacity.

\$85,447

Raise Your Average Ticket

Upsells left on the table after every job.

\$50,861

Win More Repeat Revenue

Existing customers never hear from you.

\$16,800

Get Your Time Back

Admin work never reaches the revenue line.

\$18,000

02

The money is leaking after the lead comes in

None of these losses feels big when it happens.

A missed call. An empty appointment. An upsell nobody offered. A customer nobody followed up with. A little admin work here and there.

Together, they become \$468,783 a year.

Most home-service businesses aren't losing money because they lack customers. They're losing it because the system they're running has holes in it — and those holes have become so routine, they've stopped being noticed.

The phone rings after hours. Nobody answers. The customer moves on. A job gets booked, the truck shows up, and the customer doesn't. The technician finishes, shakes hands, walks out — and never mentions the maintenance plan, the upgrade, or the next service.

None of this feels dramatic. But at scale, it quietly bleeds thousands of dollars a month out of businesses that are otherwise running well. This report breaks down exactly where that money is going — and what it's worth to stop the leak.

Missed Calls

Every call you don't answer is a job you didn't book — and a competitor who did. **Industry benchmarks put the missed-call rate for residential trades around 20%.** At a \$350 average job value, that's not a rounding error. It's a predictable, recurring loss that compounds every month.

The fix isn't hiring another person to sit by the phone. It's a 24/7 AI receptionist that answers every call, qualifies the job, and books it — at 2am on a Sunday, the same as 9am on a Tuesday.

No-Shows

You paid for the lead. You answered the call. You scheduled the job. Your tech drove to the address — and the customer wasn't there. **No-shows run 10–15% in most residential trades.** Each one costs a blocked slot, a truck roll, and a job that could have gone to a paying customer.

Automated SMS confirmations and reminders, sent at the right intervals, cut no-show rates by 25–55% against your full booking volume.

Upsell Revenue Left on the Table

Your technician is standing inside a customer's home — **the single highest-trust moment in your entire business relationship** — and they finish the job, say goodbye, and leave. No maintenance plan offered. No filter swap mentioned. No annual inspection booked.

Post-job follow-up sequences, triggered automatically after the tech closes out, prompt the customer while the experience is fresh and capture upsell revenue that would otherwise disappear.

A Customer List You're Not Using

You've already paid to acquire every customer in your database. Most operators let that list sit and do nothing. Outbound SMS campaigns — seasonal reminders, maintenance prompts, win-back messages — **turn a dormant asset into a recurring revenue channel. The customers already trust you. They just need to hear from you.**

Your Time

Scheduling, confirming, rescheduling, following up, logging calls — you or someone on your team is doing this manually. Every hour spent on admin is an hour not spent running the business.

Valued conservatively at \$75/hour, operational time has real dollar cost. Automation doesn't just save headaches — it has a measurable ROI.
