

PERSONALIZED ANALYSIS

Where your revenue is quietly walking out.

A line-by-line estimate of the recurring revenue slipping past your business — calculated from your own call volume and trade benchmarks.

MODERATE ESTIMATE

year on the table

Every figure in this report is calculated net of your platform investment. Full breakdown on the following pages.

01 The range of what's recoverable

Three modeled scenarios, from cautious to aggressive. The middle path is our realistic estimate for an operation running your volume.

02 Where the money is going

The moderate estimate, broken into its five independent revenue drivers. No double-counting — each is calculated against a separate pool.

03 The leaky bucket problem

Most home-service businesses aren't losing money because they lack customers. They're losing it because the system they're running has holes in it — and those holes have become so routine, they've stopped being noticed.

The phone rings after hours. Nobody answers. The customer moves on. A job gets booked, the truck shows up, and the customer doesn't. The technician finishes, shakes hands, walks out — and never mentions the maintenance plan, the upgrade, or the next service.

None of this feels dramatic. But at scale, it quietly bleeds thousands of dollars a month out of businesses that are otherwise running well. **This report breaks down exactly where that money is going — and what it's worth to stop the leak.**

04 Five places revenue walks out

Missed Calls

Every call you don't answer is a job you didn't book — and a competitor who did. **Industry benchmarks put the missed-call rate for residential trades around 20%.** At a \$350 average job value, that's not a rounding error. It's a predictable, recurring loss that compounds every month.

The fix isn't hiring another person to sit by the phone. It's a 24/7 AI receptionist that answers every call, qualifies the job, and books it — at 2am on a Sunday, the same as 9am on a Tuesday.

No-Shows

You paid for the lead. You answered the call. You scheduled the job. Your tech drove to the address — and the customer wasn't there. **No-shows run 10–15% in most residential trades.** Each one costs a blocked slot, a truck roll, and a job that could have gone to a paying customer.

Automated SMS confirmations and reminders, sent at the right intervals, cut no-show rates by 25–55% against your full booking volume.

Upsell Revenue Left on the Table

Your technician is standing inside a customer's home — the single highest-trust moment in your entire business relationship — and they finish the job, say goodbye, and leave. No maintenance plan offered. No filter swap mentioned. No annual inspection booked.

Post-job follow-up sequences, triggered automatically after the tech closes out, prompt the customer while the experience is fresh and capture upsell revenue that would otherwise disappear.

A Customer List You're Not Using

You've already paid to acquire every customer in your database. Most operators let that list sit there and do nothing. Outbound SMS campaigns — seasonal reminders, maintenance prompts, win-back messages — turn a dormant asset into a recurring revenue channel. The customers already trust you. They just need to hear from you.

Your Time

Scheduling, confirming, rescheduling, following up, logging calls — you or someone on your team is doing this manually. Every hour spent on admin is an hour not spent running the business.

Valued conservatively at \$75/hour, operational time has real dollar cost. Automation doesn't just save headaches — it has a measurable ROI.

05 How your numbers were calculated

Built from the call volume you entered, run through trade-specific assumptions across three scenario tiers. Each driver is calculated independently.

CONSERVATIVE

- 15% booking rate on recovered calls
- 25% no-show reduction
- 2 campaign jobs / month
- 5% upsell rate
- 10 admin hours saved

MODERATE

- 25% booking rate on recovered calls
- 40% no-show reduction
- 4 campaign jobs / month
- 10% upsell rate
- 20 admin hours saved

AGGRESSIVE

- 35% booking rate on recovered calls
- 55% no-show reduction
- 6 campaign jobs / month
- 15% upsell rate
- 30 admin hours saved

Missed-call recovery applies only to calls currently going unanswered — a separate pool from your booked jobs. No-show savings apply to your baseline appointment volume. Upsell revenue is measured against the same booked pool but a different outcome. Outbound revenue is driven by proactive outreach, fully independent of inbound volume. Every figure is net of your platform investment.

90-Day Results Guarantee

We guarantee you recover at least our service investment in booked service-visit revenue within 90 days of go-live — or we keep working, for free, until you do.

If we don't perform, you don't pay beyond the Results Engagement Period.

06 What this means for you

This isn't a magic number. Your actual results will depend on your market, your team's execution, and how the system is configured for your specific operation.

What the math shows is that for a business running your call volume, the opportunity is real — across all three scenarios, the return is meaningful relative to the investment. Across every scenario modeled, the return exceeds the investment, and in most cases, significantly.

The question isn't whether the math works. The question is whether you want to find out if it works for your business, specifically.

Across every scenario modeled, the return exceeds the investment.
